

# Reklame og filter på skolens enheter i grunnskolen

Tidspunkt: Torsdag 13. juni 2024 11:03 - 12:25  
Enhet: iPad  
Skoletrinn: 1. klasse  
Kommune: Drammen kommune  
Utført av: Climbr / hei@climbr.no

**NB: Rapporten inneholder 18+ innhold som en del av skjermbildene i rapporten**

## *Innhold:*

Testmetode og beskrivelse	2
Resultat av test: kvantitative resultater	3
Resultat av test: funksjonelle undersøkelser	4
Datatraffikk logg - annonser	25
Datatraffikk logg - sporing	48

# Testmetode og beskrivelse

I denne testen har enheten blitt koblet til en Wifi router som tilsvarer den man har hjemme privat. Routeren videresender alle datautvekslinger og oppslag mot internett til AdGuard DNS som i praksis sjekker om adressen mot et register som vedlikeholdes av AdGuard daglig med adresser som er rapportert og bekreftet brukes til annonsesporing og datautveksling om brukeres adferd. I testen vil AdGuard gi en analyse av all nettrafikken som skjer på enheten når den er koblet til et tilfeldig nettverk. Det vil også avdekke om det er installert et filter på enheten fra de som forvalter enhetene og om om dette fungerer i praksis. AdGuard har mulighet for å blokkere reklame og sporing, samt annet uønsket innhold, men dette er skrudd av for testen fordi vi bare er interessert i hva enheten selv har av slike filter og filterprofiler installert. Dermed endrer vi ikke oppførsel med denne testen, men bare analyserer hva som foregår og får rapporter slik enhetene oppfører seg i seg selv.

Resultatet av testen er beskrevet under. Det er skjermbilder som viser visuelt hva man har besøkt av nettsteder, samtidig som enheten også har mye bakgrunnstrafikk som blir beskrevet i rapporten.

## Christer Veland Aas

CEO & Technical Strategy Advisor

### Climbr

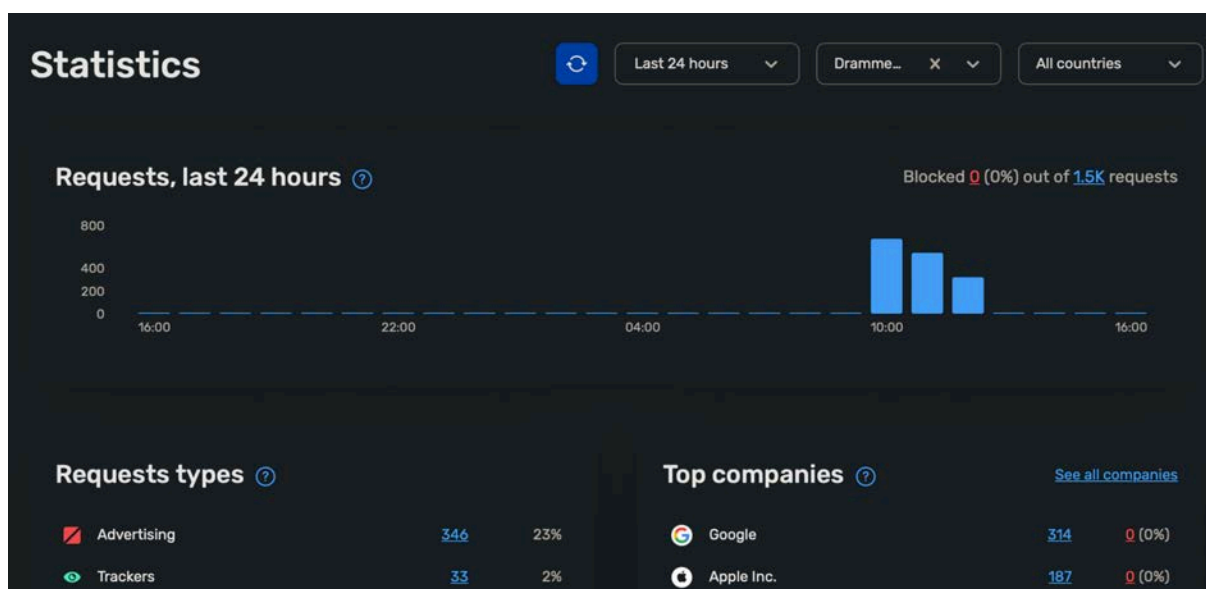

m: +47 98 69 53 02

w: [climbr.no](http://climbr.no) e: [christer@climbr.no](mailto:christer@climbr.no)

# Resultat av test: kvantitative resultater

Denne testen kjørte over en periode på ca. 1,5 timer. I denne tidsperioden kommuniserte enheten med nettstedene som vist i bildet under. Av den totale datatrafikken det:

- Totalt ble det utført ca. **1500 datautvekslinger** i løpet av de **55 minuttene** ved å besøke **VG, Google**, forlagenes skoleapper, og typiske læringsapper på maskinen som tekstbehandling, bildebehandling og kommunikasjonsverktøy som er installert på maskinen.
- **346 tilfeller av annonser** og **annonsedata 23%** av den **totale trafikken**.
- **33 springer** som er **adferdsmålinger** av hva brukeren gjør - **2%** av den **totale trafikken**.
- Trafikk som gikk ut fra denne maskinen var Google på topp med 314 datautvekslinger og fikk treff med annonsedata og adferdsmålinger også når vi besøkte andre nettsteder som VG og ved bruk av tjenester som ikke var direkte linket til Google sine brukerflater.

For detaljer se: [Datatrafikk logg - annonser](#) og [Datatrafikk logg - spring](#)

# Resultat av test: funksjonelle undersøkelser

**NB: Inneholder 18+ innhold som en del av skjermbildene - i denne rapporten er bildene sladdet for å kunne deles i større grad til flere aldersgrupper i samfunnsdiskusjonen.**

De funksjonelle testene ble gjort enkelt ved å begynne å se om man får reklame ved å besøke nettsteder som typisk har reklame. VG, Google, Youtube og NRK. Der ble visuelle funn på reklam. Reklame på VG og lignende nettsteder har ingen filter. Reklamene som ble vist var også fra Kondomeriet med sexleketøy. Denne lenken kunne følges inn på kondomeriet. Eleven er ikke logget inn med skolekonto på Google, og får reklame og blir sporet der som anonym voksen. YouTube er sperret på enheten. Det er noe filter på enheten og blokkering av de mest kjente sidene med skadelig innhold. Men til tross for dette var **Pornhub.com helt åpent** og man kunne spille av grov pornografi på nettstedet. Det er enkelt å gå til andre søkemotorer enn Google er tilgjengelig slik som f.eks. Brave.com som viser pornografisk innhold direkte. Nettsteder for spill er stort sett åpne og her er det betydelig sporing av elevens adferd og reklame. **Snapchat.com** ligger også helt åpent i løsningen og kan brukes av barna i nettutgaven. Flere og flere sosiale medier kommer nå i nettutgave.

Det anbefales bruke whitelist filter istedenfor blacklist filter på barn i småskolen og barneskolen. Det betyr at man kun åpner for de læringsressursene på nett man har databehandleravtale med eller har gjort en risikovurdering på, istedenfor å ha åpent internett for barna - hvor man lukker uønskede nettsteder man får rapportert at barna kommer inn på. Dette ville også ta vekk det meste av uønsket sporing og adferdsmålinger på barnas enheter.

Bildene under er i kronologisk rekkefølge så man kan følge tidspunktet på bildet og korrelere med analyseloggene under for å datatrafikk for annonser og sporing. Se: [Datatrafikk logg - annonser](#) og [Datatrafikk logg - sporing](#)

I disse skjermbildeeksemplene som er fra iPad finner er det markert med lilla markeringer der man finner annonser i skjermbildet og oransje der det handler om sikkert søk eller filterfunksjoner som ikke er aktivert.

## ← Sikkert søk

Filtrering er på

Med Sikkert søk kan du administrere ikke-barnevennlig innhold i søkeresultatene, for eksempel seksuell aktivitet og eksplisitt vold.

Du har ikke tillatelse til å endre innstillingen for Sikkert søk. Den er låst av sikkerhetsinnstillingene som gjelder for denne nettleseren.

### Mer om Sikkert søk

Sikkert søk er laget for å oppdage ikke-barnevennlig innhold som pornografi og eksplisitt vold på Google Søk. Hvis du ikke vil se ikke-barnevennlig innhold i søkeresultatene dine, kan du velge **Filter** for å blokkere ikke-barnevennlig innhold som er oppdaget, eller **Gjør uskarpt** for å gjøre ikke-barnevennlige bilder uskarpe.

Sikkert søk angis til **Filtre**r automatisk når Googles systemer indikerer at du kan være under 18 år.

Hvis du ikke kan endre Sikkert søk-innstillingen, kan det være fordi den styres av konto-, enhets- eller nettverksadministratoren din. Foreldre og skoler kan for eksempel låse Sikkert søk til **Filtre**r for barne- og elevkontoer. **Filtre**r i Sikkert søk kan også bygges inn i offentlige wifi-nettverk (for eksempel på flyplasser eller i biblioteker), i foreldrekontroller på operativsystemet samt i antivirusprogramvare som alle kan overstyre innstillingene dine for Sikkert søk.

Finn ut mer om:

Slik endrer du Sikkert søk-innstillingene og konfigurerer foreldrekontroll

Slik filtrerer du resultater for skole-, jobb- eller hjemmenettverk

Slik løser du problemer med Sikkert søk
